Quiz: Customer Purchase Prediction (Azure ML)

Instructions

- Total Questions: 25
- Type: MCQ
- Select the most appropriate answer

Section 1: Basics of ML Workflow

Q1. What is the main objective of this project?

- A. Predict customer age
- B. Predict premium purchase**
- C. Predict income
- D. Predict spending score

Q2. Which column is the target variable?

- A. Age
- B. AnnualIncome
- C. PurchasedPremium**
- D. TenureYears

Q3. What type of ML problem is this?

- A. Regression
- B. Classification**
- C. Clustering
- D. Reinforcement Learning

Q4. What does “0” represent in PurchasedPremium?

- A. Yes
- B. No**
- C. Unknown
- D. Error

Q5. What does “1” represent?

- A. No
- B. Yes**
- C. Missing value
- D. Random value

Section 2: Data Preparation

Q6. Why do we split the dataset?

- A. To reduce size
- B. To train and test model**
- C. To remove duplicates
- D. To visualize data

Q7. What is the training data percentage used?

- A. 50%
- B. 60%
- C. 75%**
- D. 90%

Q8. What is the purpose of random seed?

- A. Increase accuracy
- B. Ensure reproducibility**
- C. Speed up training
- D. Remove bias

Q9. Which module is used for splitting data?

- A. Clean Data
- B. Split Data**
- C. Join Data
- D. Normalize Data

Section 3: Model Building

Q10. Which algorithm is used in this lab?

- A. Linear Regression
- B. Decision Tree**
- C. K-Means
- D. PCA

Q11. Train Model requires how many inputs?

- A. 1
- B. 2**
- C. 3
- D. 4

Q12. What is the role of Train Model module?

- A. Clean data
- B. Train algorithm**
- C. Visualize results
- D. Deploy model

Q13. What must be specified in Train Model?

- A. Dataset name
- B. Label column**
- C. Algorithm name
- D. Accuracy

Q14. What is the label column in this case?

- A. SpendingScore
- B. Age

C. PurchasedPremium

D. TenureYears

Section 4: Evaluation

Q15. Which module is used to generate predictions?

A. Evaluate Model

B. Score Model

C. Train Model

D. Split Data

Q16. Which module compares model performance?

A. Score Model

B. Evaluate Model

C. Train Model

D. Clean Data

Q17. What does Accuracy measure?

A. Speed

B. Correct predictions

C. Data size

D. Errors only

Q18. What does Precision measure?

A. Total predictions

B. Correct positive predictions

C. Total negatives

D. Data quality

Q19. What does Recall measure?

A. Total predictions

B. Correctly identified actual positives

C. Data variance

D. Model speed

Q20. In business terms, high recall means:

- A. Less cost
- B. Identifying more potential buyers**
- C. Faster model
- D. Smaller dataset

Section 5: Deployment & Concepts

Q21. What is the purpose of deployment?

- A. Train model
- B. Store data
- C. Create API endpoint**
- D. Visualize results

Q22. Which service is used for quick deployment?

- A. Azure VM
- B. ACI**
- C. Power BI
- D. SQL Database

Q23. What format is used for API input?

- A. XML
- B. CSV
- C. JSON**
- D. TXT

Q24. What does Score Model output?

- A. Raw data
- B. Predictions**
- C. Graphs
- D. Code

Q25. Which of the following is a feature?

A. PurchasedPremium

B. Age

C. Prediction

D. Accuracy

(Scenario-Based)

Q26. If your model has high accuracy but low recall, what does it mean?

A. Model is perfect

B. Missing actual buyers

C. Too fast

D. Overfitting only

Q27. If marketing budget is limited, which metric is most important?

A. Recall

B. Precision

C. Accuracy

D. Random

Q28. If you want to compare two models, which module will you use?

A. Score Model

B. Evaluate Model

C. Split Data

D. Train Model
