Quiz: Document Intelligence & AI Search (Azure)

Section 1: Azure Document Intelligence (10 Questions)

Q1. What is Azure Document Intelligence primarily used for?

- A. Data storage
- B. Document processing and extraction**
- C. Web hosting
- D. Network security

Q2. Which feature allows extracting structured data from invoices and forms?

- A. Blob Storage
- B. Form Recognizer**
- C. Azure Functions
- D. Virtual Machines

Q3. What type of AI model is used in document intelligence?

- A. Reinforcement learning
- B. Computer Vision + NLP**
- C. Clustering
- D. Regression

Q4. Prebuilt models in Azure Document Intelligence are used for:

- A. Only images
- B. Only PDFs
- C. Specific document types like invoices and receipts**
- D. Gaming

Q5. Custom models are useful when:

- A. Data is already structured
- B. Documents follow unique formats**
- C. No data is available
- D. Only text is needed

Q6. Which input formats are supported?

- A. PDF
- B. JPEG
- C. PNG
- D. All of the above**

Q7. OCR stands for:

- A. Object Control Recognition
- B. Optical Character Recognition**
- C. Online Content Rendering
- D. Output Control Resource

Q8. Which Azure service is closely integrated with Document Intelligence for storage?

- A. Azure DevOps
- B. Azure Blob Storage**
- C. Azure Kubernetes Service
- D. Azure Firewall

Q9. Key-value pair extraction is useful for:

- A. Video streaming
- B. Structured form data extraction**
- C. Gaming
- D. Networking

Q10. Which of the following best describes layout analysis?

- A. Detecting colors
- B. Identifying document structure (tables, paragraphs)**

- C. Running ML models
- D. Encrypting files

Section 2: Form & Document Processing (5 Questions)

Q11. Document processing pipelines typically include:

- A. Data ingestion → Processing → Output**
- B. Only storage
- C. Only visualization
- D. Only networking

Q12. What is the role of data labeling in custom model training?

- A. Data deletion
- B. Providing examples for model learning**
- C. Encrypting data
- D. Compressing files

Q13. Structured data refers to:

- A. Random text
- B. Organized data with defined fields**
- C. Images only
- D. Audio files

Q14. Semi-structured data includes:

- A. Tables and forms**
- B. Only videos
- C. Only audio
- D. Only code

Q15. Automation in document processing helps to:

- A. Increase manual work
- B. Reduce efficiency

C. Improve speed and accuracy

D. Delete data

Section 3: Azure AI Search Fundamentals (5 Questions)

Q16. What is Azure AI Search used for?

A. Hosting websites

B. Searching and indexing data

C. Managing networks

D. Running VMs

Q17. A search index is:

A. A database backup

B. A structured collection of searchable data

C. A virtual machine

D. A firewall

Q18. What is the role of an indexer?

A. Deletes data

B. Pulls data from sources into the index

C. Encrypts data

D. Displays UI

Q19. Data sources for Azure AI Search can include:

A. Azure Blob Storage

B. SQL Database

C. Cosmos DB

D. All of the above

Q20. What is a skillset in Azure AI Search?

A. UI design

B. AI enrichment pipeline

- C. Storage system
- D. Network configuration

Section 4: Indexing & Semantic Search (5 Questions)

Q21. What is indexing?

- A. Deleting files
- B. Organizing data for fast search**
- C. Encrypting data
- D. Compressing data

Q22. Semantic search focuses on:

- A. Exact keyword matching
- B. Understanding meaning and intent**
- C. Only images
- D. Only numbers

Q23. Which feature improves search relevance?

- A. Ranking algorithms**
- B. Data deletion
- C. Storage size
- D. Bandwidth

Q24. What is full-text search?

- A. Searching only titles
- B. Searching entire document content**
- C. Searching images only
- D. Searching metadata only

Q25. Which technique helps in better query understanding?

- A. Synonyms**
- B. Encryption
- C. Compression
- D. Backup
